SPINDRIFT—Heavily ruffled cream with yellow throat. Very nice. L 40c, M 30c, S 20c, Blts. 10-40c.
SPOTLIGHT—Nice deep yellow with warm red spot in throat. L 2-20c, M 4-25c, S 8-25c, Blts. 15-15c.
STELLA ANTISDALE—Large light pink with creamy throat. L 3-25c, M 3-15c, S 3-10c, Blts. 25-10c.
STERLING—Heavily ruffled rosy lavender with darker self throat. Very fine. L \$2.00, M \$1.25, S 75c, Blts. 20c.
STORM KING—Dusty pink, lightly overlaid gray, shading to crimson in throat. S 2-25c, Blts. 10-15c.
STRAWBERRY PEACH—Beautifully ruffled orange-pink with soft scarlet spot and feathering. Excellent texture. L 35c.
SUNBURST—Heavy textured clear orange-apricot with deeper self marking. L 3-25c, M 3-15c, S 3-10c, Blts. 25-10c.
SUNGLO—Glistening light orange with lighter throat and self pencilings. L 3-25c, M 3-15c, S 3-10c, Blts. 25-10c.
SUNKIST—Glowing apricot pink with cream lower petals powdered with apricot. Outstanding. L 75c.
SUNLIGHT—Ruffled brilliant light orange shading to golden center. L 25c, M 2-25c.
SUNSPOT—Vigorous growing light apricot-buff, offset by a rose spot in throat. L 35c, M 25c, S 2-25c, Blts. 10-25c.
SURFSIDE—Beautifully ruffled white. One of the best. L 3-20c, M 3-15c, S 3-10c, Blts. 25-10c.
SURPRISE—Distinctive smoky slate, edged orange, with contrasting cream blotch on lower petals. S 35c, Blts. 3-25c.
SUSQUEHANNA—Attractive apricot-pink flesh with creamy throat. Excellent texture. L 2-20c, M 4-25c, S 8-25c, Blts. 15-15c.
SWING—Heavy textured pure white. S \$1.50, Blts. 35c.
TEXAS—Early pure white. L 25c, M 20c, S 15c, Blts. 10-15c.
THISTLE DEW—Light peach pink with creamy peach throat and self pepperings. L 3-25c, M 3-15c.
TIVOLI—Lovely clear light rose. L 2-25c, M 2-15c, S 2-10c, Blts. 15-15c.
TOBRUK—Fine dark red. S 75c.
TOWN TALK—Tall, heavy textured, glistening light salmon with dull red feather in throat. L 2-25c, M 2-15c, S 2-10c, Blts. 15-15c.
TUNIA'S ATOMIC BURST—Large vivid bronze red with smoky overcast. S 35c, Blts. 5-30c.
TUNIA'S FANCY—Deep salmon pink. S 35c, Blts. 3-25c.
TUNIA'S MASTERPIECE—Vigorous growing lavender. S 50c, Blts. 4-25c.
TUT'S BOTH—Glistening orange with small blue tongue. S 6-25c, Blts. 10-10c.
UHU—Smoky rose salmon, flecked bronze, with attractive cream throat. L 2-25c, M 2-15c, S 2-10c, Blts. 15-15c.
VALERIA—Popular clear light red with a silky sheen and fine white line on lower petals. L 2-20c, M 2-15c.
VREDE (PEACE)—Slightly ruffled pure white. S 2-25c, Blts. 10-40c.
VULCAN—Nice ruffled purple on the red-violet shade. L 2-20c, M 4-25c, S 8-25c, Blts. 15-15c.
WEDGEWOOD (K. & M.)—Tall growing deep violet. S \$1.50, Blts. 35c.
WELTWUNDER (WORLD EATER)—Clear light yellow with distinct red blotches on lower petals. L 35c, M 25c, Blts. 10-35c.
W. J. DAKERS—Variegated soft shade of pink with creamy lemon tongue. M 25c.
WHITE GOLD—Enormous, slightly ruffled cream, blending to gold in throat. L 3-25c.
WHITE MAGIC—Tall heavily ruffled white. L \$1.00, M 75c, S 50c, Blts. 25c.
WHITE WINGS—Outstanding ruffled white we highly recommend. L \$1.00, M 75c.
XENO—Ruffled warm orange suffused with harmonizing yellow. L 2-25c, M 2-15c.
YELLOW GOLD—Nice clear light yellow, bit darker in throat. L 3-25c, M 3-15c, S 3-10c, Blts. 25-10c.
YELLOW HERALD—Slightly ruffled rich yellow. Popular early commercial. L 3-25c, M 3-15c, S 3-10c, Blts. 25-10c.
ZOMBIE—Attractive smoky salmon offset by dark brown blotch. S 25c, Blts. 10-50c.

GREETINGS!

A "Glad" New Year to you from Flying Cloud Farms — old friends, new friends, and those we hope to have!

The old friends and customers know our policies and have apparently approved of the bulbs they have received and the manner in which their order was treated. We also appreciate their confidence in us and hope we may continue to help them.

To the friends we anticipate, let us explain that we give you a personalized service. Regardless of the size of the order it carries to you, not just the bulbs, but the reminder that we wish at all times to help you with "glad" problems.

Remember you are always welcome at Flying Cloud Farms.

TERMS

The day an order is received we mail you a card or letter of acknowledgement. If this does not arrive promptly please let us know. We may be able to trace it then but if we do not know about it for a couple of months it is hopeless. When sending cash with an order, it is better to register the letter as we do not feel we can assume this risk.

Where bulbs, not bulblets, are priced each, ten bulbs of a variety will be sold at eight times the single price; five bulbs or more at the ten rate. Large bulbs will be 1 1/4" up, medium will be 3/4" up, and small will be 3/8" up. As long as available, the larger bulbs of each grade will be used.

Please do not ask us to accept an order for less than \$2.00, which must be accompanied by cash in full, and no single item for less than ten cents. On orders of \$5.00 and up we will accept 25% with the order, balance before shipment. We will prepay all orders to any point in the United States or Canada except any wholesale orders. Foreign orders, except Canada and Mexico, must be accompanied by money order or draft and shipping charges. To our Canadian customers, may we suggest that you secure a permit from your Dept. of Agriculture before ordering.

We shall personally see that full value is given to every customer. If you are not pleased with the stock when received or if, after you have grown it, you are not satisfied with the results, please let us know and we will make every effort possible to please you as we guarantee satisfaction.

BULB DISCOUNTS

Cash Orders for \$3.00 to \$10.00 select 5% additional stock.

Cash Orders for over \$10.00 select 10% additional stock.

Discount privileges, for additional stock only, are for cash with order. These discounts do not apply to the Collection. We will be generous with our count and extras but we will not be able to accommodate with varieties that we have small stocks of.

SHIPMENT

We ship by either parcel post or express, whichever we think best and cheapest or safest at the time shipment is desired, so if your express office is different from your mail address be sure to state it on the order. Where you ask for "immediate" or "at once" shipments, we will endeavor to carry your suggestions out, weather permitting, but please be patient as many times our weather conditions here vary so greatly with weather conditions on the other end. We are equipped to store your orders until you wish them in the Spring and we guarantee safe delivery of all shipments.

When you receive your order, **open the package at once** and allow the air to get to the bulbs. If there are only a few in each bag, open the top and stand the bag up in a box. If there are many bulbs, it is advisable to pour them out, each variety in a separate shallow box. Now store them in a cool dry place until planting time.

SUBSTITUTION

In no case will any other variety be substituted for the variety ordered except with your permission on orders received prior to April 1. However, if you give us a few suggestions for second choice, or permit us to send more of those available on the order, to make up the value, we would appreciate it. All orders are put up and put aside in the order received regardless of the shipping date. **No orders accepted after May 15., except collections.**

PACTOLUS

Bulblets

While we guarantee to satisfy our customers, **it is not possible for us to guarantee the germination of bulblets.** Some varieties are hard to germinate and need good care to get the best results. We want our customers to be sure they understand clearly that they must not expect us to replace them if they do not germinate. Of course a big percent usually will grow but if they are valuable ones, and are cracked before planting, and kept well watered, the per cent that will grow will be much increased. We will always select the largest bulblets available of the variety ordered.

Aristocratic Collection

This Collection is widely known as the range of color and quality is exceptionally fine. The cost of the bulbs, if purchased separately, and each variety named, would be at least three times the price of this **unlabeled collection.**

100 assorted large (1 1/4" up) bulbs for \$7.00; 50 for \$3.50. With each collection of one hundred bulbs we will add — free — 1 large bulb (labeled) of an outstanding variety.

Same Collection but of medium size bulbs: 100 for \$5.00; 50 for \$2.50. With each collection of one hundred bulbs we will add — free — 1 medium bulb (labeled) of an outstanding variety.

GLAD TIPS

The trouble with this "chat" about glads is the fact that there are so many fine varieties now, — both domestic and foreign — that it is difficult to mention any special ones. Also, outstanding varieties in one garden may not perform anywhere near as well in the garden of another. It may be soil, — it may be culture — so many things may enter the picture.

Here at Flying Cloud Farms we are growing what appeals to us as outstanding among the newer ones but our stocks are not large and also the trial period for them has been brief, so we hesitate to enthuse too greatly. Many of the newer ones, — and this has happened with every originator, even from way back, — grow beautifully under normal conditions but when the unpredictable seasons come, as they have the past few years, — we get disappointments!

Some of the new foreign glads are lovely and it is hard not to really boost them at this time but we honestly cannot give you a true picture. The United States has given us some "world beaters" — and I mean World Beaters! Many we have picked from the show benches but two excessively dry seasons, — even with irrigation — has narrowed the field somewhat.

Remember, it isn't always price that signifies superiority for there are beautiful glads that will always have a place in your garden. They may not be the most recent varieties but are tried and true. It is discouraging of course to pay such high prices one year and find them cut so drastically the next year. However, this is not intentional but is due to the fact that some varieties prove more prolific in certain localities, or perhaps, again, the culture is more perfect.

We planned to give the classification with the varieties this year but despaired! There is a question in our minds because of certain examples that have come to our attention so we decided to continue as we have previously listed them and will be glad to help you to the best of our ability. Do not hesitate to ask us any questions regarding classification, or any other gladiolus problems you have, and we will endeavor to help you.

RAVEL

SUCCESSFUL GLADIOLUS CULTURE

Present day varieties of gladiolus can be grown easily and in every section of the United States or Canada. Just be sure and plant good bulbs, free of disease. Give them a sunny exposure and be sure that they have a sufficient amount of moisture. If the season is like the past season, you certainly will have to help them with a good soaking once a week.

Large bulbs are necessary to produce exhibition blooms but your medium and small bulbs of some varieties, will bloom and, on the latter two sizes, of course your bulblet production is much greater.

If your soil is a heavy clay soil, a depth of three inches is sufficient for your bulbs perhaps but a sandy soil necessitates deeper planting for best results. Plant large bulbs about six inches deep and about five inches apart in light sandy soil; medium bulbs four inches; and small bulbs three inches. If you are mainly interested in bulblet increase, plant as close to the surface as possible; if blooming size bulbs, you will probably have to stake them. Light soils will usually give more bulblets than heavy soils.

Your first planting can be about the time farmers plant potatoes in your locality and your last planting should be about 120 days before your usual first frost. We make three plantings, three or four weeks apart, to insure a long blooming period, and suggest, in south-eastern New England: April 6 to 15 — May 10 or thereabouts — and June 1 to 20.

Either spade or plough (depending on the size of the garden) the soil deeply, preferably in the fall, leaving it rough during the winter. If stable manure is used, put it on before spading and it will be well rotted by spring.

We prefer planting in double rows in a trench as the bulbs tend to support one another. The rows are from 18 to 36 inches apart, depending on your method of cultivation, — by hand or machine. Allow about five inches between large bulbs and less for small sizes.

As we previously stated, stable manure, well rotted, will give you the finest results, but for larger plantings, it is often necessary to resort to a commercial fertilizer. Here, at Flying Cloud Farms, we have found that either Vigoro or Agrico supply the needed elements and have given us excellent results.

To prepare your rows for planting, loosen the soil well to at least an inch lower than you intend to plant your bulbs. Use about four pounds of fertilizer to 100 feet and work it well into the bottom of the trench, — then let it stand a day or two. When the bulbs are set in the trench, cover and hill up a bit. As small weeds appear, rake down level again and that first crop of weeds is killed. When the glads are eight to ten inches high, a surface feeding is advised at the rate of four pounds to 100 feet of row. This should be scattered on both sides of the row and worked lightly into the soil. A similar feeding should be applied as the buds appear.

Cultivation is very important. We use lawn brooms in the planted rows on light soil and cultivators between the rows, but hoeing, scratching, brooming, or whatever

method of cultivation you use, must be done often, — about every fifth day. If it rains, or we irrigate, we try to cultivate as soon as it dries out.

We guarantee our bulbs to be absolutely free of thrips or disease when we ship them but advise you to dip them nevertheless. We **soak** our bulbs, as we plant them, **in Bichloride of Mercury** (Corrosive Sublimate) from **8 to 10 hours** in a solution of **one ounce to seven gallons of warm water.** This prescribed time is for bulbs with the husks on. If you peel the bulbs, six to eight hours is sufficient. For this dip, **wooden, glass, or crockery containers must be used** as metal causes a chemical reaction. The **Lysol dip** is also very widely used: **1 tablespoon to 1 gallon of water, soaking the bulbs four to eight hours,** depending upon whether the bulbs are husked or not. We advise planting before the bulbs have dried out, when using either of the above mentioned dips.

Another effective dip is the **New Improved Ceresan: one ounce of this and 3 teaspoons Grasselli Spreader Sticker to 3 gallons of water.** For large quantities: **1/2 lb. N. I. Ceresan and 5 teaspoons Grasselli Spreader Sticker to 25 gallons water.** With this treatment the bulbs only have to **soak fifteen to thirty minutes** but the solution should not be allowed to settle. The Ceresan treatment is so much shorter it has become popular but you **must** plant the dipped bulbs the same day.

As your glads grow, do watch for any signs of thrips. It is advisable to spray them when the growth is about six inches high as thrips are hard to distinguish and a few at this stage in the growth of your glads would multiply enough to make serious damage later. As a **spray**, we have used **Tartar Emetic** very successfully. The formula is: **4 pounds Tartar Emetic, 16 pounds brown sugar, to 100 gallons of water.** For home gardens use: **1 gallon of water, 1 1/2 teaspoons Tartar Emetic, and 9 tablespoons (1/2 cup plus 1 tablespoon) brown sugar or molasses.**

Dusting with DDT powder, 5%, while the leaves are still moist, is the most recent suggestion, and we have found it to be very satisfactory. Any type of dust application, with favorable conditions, is more easily applied. This is also advisable in storage.

Digging may be done any time from four to six weeks after a variety has stopped blooming. Be sure to cut the tops off close to the bulb and spread the bulbs out in low boxes to dry, preferably where air can move around them. Your drying conditions will determine how soon the bulbs can be cleaned (the old bulb should come easily and be destroyed.) Now store in a cool dry place. If you use naphthalene flakes, we suggest that you put half a handful on a paper in each box, then stack your boxes and cover to keep the fumes confined. If this treatment is carried out where the temperature is not too cool, the thrips (if there are any) will be more active and the naphthalene will take effect more quickly and thoroughly. Leave them two weeks at least and then uncover, remove the naphthalene, and store your bulbs, as suggested, for the winter.
